Thanks for asking, Pharmacy Intern Answered by: And how much would it cost? Doxycycline Precautions and Possible Interactions Doxycycline should not be administered to an animal with a known allergy to the medication or one who has been hypersensitive to it in the past. Doxycycline is an anti-bacterial medication which requires a prescription from your veterinarian. If the animal experiences hives, swelling of the face, lips or tongue or has difficulty breathing, contact the veterinarian immediately, as these are signs of an allergic reaction. Join Our Social Network. A compounded medication is the creation of a particular medication to fit the unique needs of a patient, including changing the form of the medication e. The treating veterinarian determines the mode of administration, as well as dosage and frequency. What is Doxycycline Compounded? Doxycycline should not be administered in tablet form to cats, as it may damage the esophagus. If the patient is taking any other medications, it is important to discuss them with the veterinarian, since Doxycycline can potentially interact with one or more of them. This medication should not be administered to animals younger than seven months of age, as Doxycycline may bind to calcium in the teeth, causing discoloration. Doxycycline Compounded is a compounded medication for the treatment of bacterial infections in dogs and cats. Available Price w/coupon SAVE20 Doxycycline is an antibiotic used to treat infections like Lyme disease, chlamydia, Rocky Mountain spotted fever, and bacterial infections caused by susceptible organisms.
