Ibuprofen can also be a stomach irritant, but this occurs much less commonly than with aspirin. Perhaps the best example of a minimal performance difference despite a massive price discrepancy is the case of over-the-counter generic medications versus brand-name versions. Leave this field blank. It may have some advantages over aspirin, depending on the type of pain you are experiencing. Generally, people who have risk factors for heart disease may be at greater risk for having serious cardiovascular problems, such as strokes and heart attacks, from NSAID use. Responses Apr 27, Thank you for taking the time to write such an informative yet easy to read article. So before you reach for one of the many bottles on the drugstore shelf, read on to learn about one type of OTC pain relievers -- non-steroidal anti-inflammatory drugs NSAIDs -- and the benefits and risks of taking them. Brand-name products inevitably cost more. The side effects can vary a bit from drug to drug, but most commonly include: Are over age 60 Are pregnant or nursing Have three or more drinks of alcohol every day Have bleeding problems Have liver or kidney disease Have heart disease Take a medicine to thin the blood, such as warfarin Coumadin Take a medicine for high blood pressure Children and teenagers who are recovering from a viral infection such as the flu or chickenpox should not take aspirin. While there may be a hundred different color boxes and bottles on the shelf, there are basically four different types of non-prescription pain-relievers, otherwise known as analgesics. Please enter a valid email address. If you would like to obtain more information about these advertising practices and to make choices about online behavioral advertising, please click here. Many people also use NSAIDs to relieve the pain of arthritis or to treat the aches and pains of the common cold and flu. How we experience pain and the amount of pain relief we get from NSAIDs varies from person to person. Jan 26, Thank you for this description, it is clear, concise and understandable. Hopefully this helps clear up some of the confusion. Apr 7, - Have a headache, a body ache, or a pulled muscle, and odds are ibuprofen or aspirin or acetaminophen will do the trick. Even better, as Best of all, OTC painkillers are cheap and easy to find. All pharmacies carry both brand name and generic varieties that are cheaper and work just as well. We were.
