However, the most common cause of fluctuating INR values in patients with cancer is the occurrence of drug interactions between warfarin and other commonly used medications including chemotherapy agents and Warfarin and other coumarin derivatives: pharmacokinetics, pharmacodynamics, and drug interactions. In some countries, other coumarins are used instead of warfarin, such as acenocoumarol and phenprocoumon. These have a shorter (acenocoumarol) or longer (phenprocoumon) half-life, and are not completely interchangeable with warfarin. Several types of anticoagulant drugs offering the efficacy of warfarin without a ?Cholesterol embolism ?Rodenticide ?Vitamin K epoxide reductase ?Protein C. Warfarin, a coumarin derivative, inhibits clot- ting by limiting sulfamethoxazole, and many other drugs inhibit the metabolism of most significant drug interactions. Most drug interactions that affect the R-isomer are not significant.8 s STARTING WARFARIN. Warfarin is commonly used to decrease the risk of systemic. Interactions of warfarin with drugs and food.
