Ibuprofen injection is a nonsteroidal antiinflammatory drug (NSAID) that is used alone or together with other medicines (eg, opioid analgesics) to relieve mild to severe pain. It is also used to treat. May 31, - There's aspirin, ibuprofen, acetaminophen, and naproxen each sold under several brand names. Here's what you need to know to choose the right one for you. The analgesic and non-steroidal anti-inflammatory drug (NSAID) ibuprofen is sold under a wide variety of brand names across the world; the most common being its first registered trademark name of Brufen, along with Advil, Motrin, and Nurofen. Feb 20, - Medicines may also have one or more brand names. The drug company that makes a medicine chooses a brand name that is usually easier to say and remember than the generic name. For example, Motrin is a brand name for a medicine used to treat pain. Its generic name is ibuprofen. Motrin was chosen. Jun 19, - To be certified a "generic" by the Food and Drug Administration, a pain reliever has to have the same "active ingredient" as its brand name equivalent. For instance, the "active ingredient" in Advil is ibuprofen. The generic also has to have an efficacy rate similar to that of a name brand, usually within a Brand name drugs versus generics. When it comes to ibuprofen, there is considerable confusion about the effectiveness of brands such as Advil and Motrin compared to their generic equivalents. Is it worth paying the premium for the brand name products? Here is some information to help you decide. At the pharmacological level, they're all the same because they're all composed of the same base compound, that being Ibuprofen. Advil and Motrin are in fact simply brand name versions of Ibuprofen, which is itself available as a generic. So the most significant difference between the three, at least for most people, is that.
