Many medications can cause side effects. Stop taking the medication and seek immediate medical attention if any of the following occur: Depending on your specific circumstances, your doctor may want you to: . What will it do for me? If you have reduced kidney function, discuss with your doctor how this medication may affect your medical condition, how your medical condition may affect the dosing and effectiveness of this medication, and whether any special monitoring is needed. To prevent symptoms brought on by consuming food or beverages, take the dose 10 to 15 minutes before eating food or drinking beverages that are expected to cause symptoms. An interaction between two medications does not always mean that you must stop taking one of them. The easiest way to lookup drug information, identify pills, check interactions and set up your own personal medication records. Medications other than those listed above may interact with this medication. Before you begin using a medication, be sure to inform your doctor of any medical conditions or allergies you may have, any medications you are taking, whether you are pregnant or breast-feeding, and any other significant facts about your health.
