A further women died from other causes, without recurrence. Adherence to tamoxifen was investigated by examining the proportion of the expected treatment period five years or cancer recurrence or death if these occurred before the end of the five year period that was covered by tamoxifen prescriptions. Published online September 3 Although the authors of this study suggest that interventions encouraging women to continue taking tamoxifen daily for the whole of the recommended fiveyear period may be cost-effective, further research is required to find out what these interventions may be. To look at the cost effectiveness of adjuvant tamoxifen, the researchers investigated levels of adherence among women prescribed adjuvant tamoxifen in Tayside, Scotland, over a year period. The study authors suggest that it would be cost-effective for the health service to intervene to encourage women to continue taking tamoxifen daily for the whole five-year period. Larger studies will be required to see if women who take tamoxifen regularly but for a shorter period than recommended have different outcomes from those who take tamoxifen for a longer period of time but at less regular intervals. It is not clear what this is based on, as the study did not investigate the reasons for low adherence not taking medicine as it is prescribed. They looked to see if the women had died and if so what caused their death , and whether their cancer had recurred and if so the type of recurrence. McCowan C, et al. The certificate lasts for 5 years and can be renewed if you are still eligible. Skipping breast cancer drugs costs lives, warns charity. The reasons for low adherence were not explored in this study. Your GP or hospital doctor will need to sign the form. Jan 29, - UK prices for generic cancer drugs have risen sharply in the past five years, restricting their use in treating NHS patients, research from the European Cancer Congress has found.
