Buspirone is used to treat certain anxiety disorders or to relieve the symptoms of anxiety. Some antiseizure meds are required to be brand because there have been enough cases of generic relapse to demand it. Even though they both have the same effect, it is possible and allowed for generic medication to have different inactive ingredients. Buspirone was patented in and gained FDA approval in . Because no one knows for sure why that is, it is often poo-poo'ed by critics, basically claiming that if you felt good on brand and then deteriorated on generic it is all your imagination, and the same wild imagination with thousands of other people. To contact them about something other than this post, please use this form instead. If the other dose is scheduled soon, just skip previous. Can a dysphagic person take a form of buspar in SUBlingual form or other form than oral Means when swallowing is compromised. I think, personal opinion, many people have missed out on what would have been a good med for them by never giving the brand versus the generic a chance. I asked my local pharmacist about this topic, if they ever see a difference between generic and brand. However, buspirone usually is not used for anxiety or tension caused by the stress of everyday life. As the patent expired in , Buspirone Buspar is only available as generic drug nowadays. Me for example, I did better on generic Nortriptyline and felt bad on the brand. The archives here abound with reports of inequivalence between generic and brand. In case of switching from another anxiety medication to Buspar Generic , it is better if user slowly decreases dose of previous medication used rather than stops suddenly. Keep in mind, generics do not have the same ingredients brand does. Probably one of the more outstanding ones was SLS decline on generic lamictal, even upon raising the dose considerably higher, with a prompt return to efficacy upon reinstating the brand.
