Older and often cheaper drugs, including anticonvulsants, opioids, and hypnotics such as benzodiazepines and nonbenzodiazepines, may also be used to treat symptoms. The gambling urges began, on average, about nine months after patients began taking either Requip or Mirapex, which target motivation, emotion, and reward receptors in the brain. Weighing the risks [ pagebreak ] But they're not without risk Dopamine agonists will not work for everyone. For others the drugs won't have much effect at all. Researchers suggest that anyone taking these drugs be screened for compulsive behaviors and monitored carefully for warning signs. Thanks to aggressive pharmaceutical marketing, doctors and patients have heard a lot in the past few years about this controversial condition. All drugs come with risks, so you'll have to decide with your doctor which medication, if any, is the right choice. This process, called augmentation, makes conditions like RLS frustratingly difficult to treat long term. RLS patients have to decide whether a drug's benefits will outweigh its risks. In a Mayo Clinic study found 11 cases of patients who had developed gambling habits while taking dopamine agonists for Parkinson's disease. They also have a number of common side effects, including nausea and dizziness. Restless legs syndrome RLS is out there, and so are the pills to treat it. Requip generic name ropinirole and Mirapex generic name pramipexole, both originally used to treat Parkinson's disease. Traditional sleep aids may also help Luckily, dopamine agonists aren't the only option for RLS sufferers: Because sleep deprivation can make RLS worse, treating an underlying case of insomnia or sleep apnea may be the best way to calm your symptoms. In separate studies, patients who took either Requip or Mirapex were more likely to feel improvement over a week period than those who took placebos; both drugs have also been shown to be safe and effective for up to nine months. Symptoms can return worse than they were originally, and patients often have to change doses, switch drug classes, or take a drug holiday to eventually get relief again.
