Behaviour therapy provides support for carers of children with ADHD, and may involve teachers as well as parents. Social skills training involves your child taking part in role play situations, and aims to teach them how to behave in social situations by learning how their behaviour affects others. Although methylphenidate isn't licensed for use in adults, it may be taken under close supervision from your GP and specialist. If you or your child is prescribed one of these medications, you'll probably be given small doses at first, which may then be gradually increased. Guanfacine Guanfacine acts on part of the brain to improve attention and it also reduces blood pressure. Getting to know people at local support groups can stop you feeling isolated and unable to cope. Atomoxetine has also been linked to some more serious side effects that it's important to look out for, including suicidal thoughts and liver damage. As well as taking medication, different therapies can be useful in treating ADHD in children, teenagers and adults. Living with Previous page: For teachers, behaviour management involves learning how to plan and structure activities, and to praise and encourage children for even very small amounts of progress. You may also be offered parent training before your child is formally diagnosed with ADHD. CBT can be carried out with a therapist individually or in a group. Behaviour therapy Behaviour therapy provides support for carers of children with ADHD, and may involve teachers as well as parents. Discuss this with your GP, who may refer you to a dietitian a healthcare professional who specialises in nutrition. Some medications need to be taken every day, but some can be taken just on school days. A programme usually consists of meetings, which each last up to two hours. If either you or your child begin to feel depressed or suicidal while taking this medication, speak to your doctor. These programmes are usually arranged in groups of around parents.
