Reid JM(1), Goetz MP, Buhrow SA, Walden C, Safgren SL, Kuffel MJ, Reinicke KE, Suman V. Jun 7, - The anti-estrogen tamoxifen is characterized by a large variability in response, partly due to pharmacokinetic differences. We examined circadian variation in tamoxifen pharmacokinetics in mice and breast cancer patients. Pharmacokinetic analysis was performed in mice, dosed at six different times (h ?Introduction ?Methods ?Results ?Discussion. Breast Cancer Res Treat. Jul;(1) doi: /sx. Epub Jun 7. We investigated the kinetics of tamoxifen (tam) in immunodeficient mice and rats after oral treatment and compared drug and metabolite profile in nude rat Thus, the kinetics of tam observed in the present study suggest that the nude rat may represent a preferable animal model in studying the pharmacokinetics of tam and. Jul 27, - A number of hydroxylated metabolites were noted (Figure 3) following the administration of <sup>14</sup>C labeled tamoxifen to various species (rat, mouse, monkey, and dog). The major Problems of pharmacokinetics, absorption and subsequent metabolism all conspire to confuse the interpretation of data. Studies. Nov 4, - 15 days pre-treatment with red clover did not alter the tamoxifen and its active metabolite 4-hydroxytamoxifen pharmacokinetics significantly (p > ). Langan-Fahey S. M., Johnson D. To establish the kinetics and persistence of tamoxifen-dependent activation of ERTAM proteins in tissues in vivo, we used the p53KI/KI mouse model, assessing . Metabolites, pharmacodynamics, and pharmacokinetics of tamoxifen in rats and mice compared to the breast cancer patient. Up to two years, there was no treatment related increase in liver tumors in any of the mouse strains with or without phenobarbital promotion [36]. Tamoxifen was detected in the mouse livers, but at levels 50 times lower than those reported in a comparable rat study. Results suggest that the pharmacokinetics of tamoxifen in. Dec 20, - The metabolism of tamoxifen was examined in the rat, mouse, and human breast cancer patient. Large oral doses of tamoxifen ( mg/kg) in the immature ovariectomized rat and mature mouse produced circulating levels of the parent compound, N-desmethyltamoxifen, and 4-hydroxytamoxifen.
