After this time, it is shed and is closely followed by a new hair growing from the same follicle. You should talk to your doctor before taking larger doses of for a longer period than recommended. How does Finasteride work? When the hair has been gone for extended periods of time, the hair may become permanently lost hence timely treatment is beneficial. Normally, one hair grows from each hair follicle for about three years. Five star service highly recommend. A topical hair loss lotion that needs to be applied twice a day. Finasteride is a drug used to treat male pattern hair loss, a common condition that involves hair thinning on the scalp that often leads to a receding hair line or balding on the crown of your head. It is important that you continue treatment long enough to see the results on male pattern hair loss, as the improvement won't occur overnight. Generic manufacturers have to demonstrate that they are medically identical to the branded product - i. Saturday, 10 March Order Within: Excellent service with quick delivery as advertised. Signature required on delivery. As a result of using Finasteride, the levels of the dihydrotestosterone hormone are lower and a positive effect can be seen on the maintenance of hair and hair growth of men who suffer from male pattern hair loss. Always read the patient information leaflet before commencing treatment. Customer Services What is the difference between Finasteride and Propecia Finasteride is the active ingredient in Propecia and is available in a generic, unbranded tablet.
