While minoxidil has been clinically proven to slow the progression of hair loss and regrow some hair, most experts see it as a relatively marginally effective drug in the fight against hair loss. Remember that successful treatment of hair loss is greatly dependent on early intervention. Continued Published on March 1, Minoxidil Rogaine Minoxidil was the first drug approved by the FDA for the treatment of male pattern baldness. It is DHT that shrinks or miniaturizes the hair follicle, which eventually leads to baldness. The AHLA does not recommend minoxidil as the first line of attack for men suffering with male pattern baldness, but does recognize it as an effective treatment for a small percentage of its users. The American Hair Loss Association recommends finasteride as the first line of attack for all men interested in treating their male pattern baldness. If a hair loss treatment is not approved by the FDA or recommended by the American Hair Loss Association, chances are you are wasting your time and money. The bottom line is that most advertised "treatments" do not work for the prevention and treatment of hair loss. Some enterprising researchers had the notion that applying minoxidil topically, directly on the head, might grow hair on balding areas. At this point, the only truly effective medically proven way to arrest the hair loss process is to lower DHT levels. However, with that said, the vast majority of hair loss treatments being marketed today are still nothing but "snake oils. For the first time in the history it is now possible to stop or slow the progression of hair loss and to replace lost hair through surgery with completely natural results. For many years, minoxidil, in pill form brand name Loniten, was widely used to treat high blood pressure. The following two treatments have been clinically proven to successfully treat hair loss in men to varying degrees. Finasteride was originally developed by the pharmaceutical company Merck as a drug Proscar to treat enlarged prostate glands. The FDA has only approved two prescription drugs for hair loss treatment: minoxidil (Rogaine) and finasteride (Propecia). Both of these hair loss remedies have proven to be effective at reducing hair loss and, in some cases, even growing new hair. Below, you will find information about the non-surgical hair loss products. Dec 5, - When people hear "hair loss treatments" they typically think Propecia (finasteride) or Rogaine (minoxidil). Many generic options exist and are generally more affordable than the brand name products, and if from the right source, are just as effective. Generic drugs must also undergo the FDA process of. Jun 28, - If you're suffering from male pattern baldness, you'll have probably heard about Finasteride and Minoxidil. You can purchase generic brand Proscar very cheaply in 5mg doses and cut the tablets into fifths. It's not If you decide on using Proscar, be sure to purchase it from a reliable, legitimate source. The reason Propecia and Minoxidil are different from the many other hair loss treatments on the market is that they are the only pharmaceutical products which have been tested and licensed for the treatment of genetic hair loss by official regulatory bodies on both sides of the Atlantic. In the UK, Minoxidil and Propecia are. Jul 24, - Where to Buy Topical Finasteride. As a newer treatment, the companies that are currently producing topical finasteride (either alone or combined with minoxidil) are few and far between. A few of the more popular sellers include MinoxidilMax and Hasson & Wong however, neither is available in the US. May 3, - There are many examples where physicians will allow the simultaneous use of both Finasteride and minoxidil topical for hair loss treatment for possible multiplier beneficial effect. Propecia is regarded as a first line of defense in the battle against male pattern baldness.. Between the two FDA approved hair. Apr 9, - Mild scalp irritation can develop in some, but this can largely be avoided by minoxidil foam rather liquid. Like Propecia, it can take while to see results up to six months so be patient. It is otherwise well tolerated, and affordable: as cheap as \$10 per month. 8. Men who are trying to conceive might want to. Jump to Minoxidil (Rogaine) - Cosmetic Procedures for Hair Loss.
