Fortunately, there are ways to make administering feline medication easier. Pharmaceutically compounded transdermal gels make medication much easier on pet patients and their owners, and many of the most common feline medications, including methimazole, prednisolone, and amitriptyline, are available in the transdermal format. It may be necessary to quarantine your cat during this time if contact is unavoidable. First Name Last Name Email. Next, carefully remove the gloves with a paper towel, and dispose of the gloves and the paper towel in a receptacle that will prevent accidental exposure. The Pinna is a hairless area near the tip of the inside of the ear is typically the best place. Otherwise, you might end up absorbing some of it into your system, which is obviously best avoided. If possible, get your cat to come to you with a treat or the promise of a thorough petting. Then, re-cap the syringe and place it in a secure cabinet, thoroughly washing your hands afterward. If the area is dirty or there is residual medication from a previous administration, carefully wipe the area with a warm, moist paper towel. First, rinse your gloves off under the faucet. Transdermal gels are one of the easiest but least-known pet medication delivery methods. Be careful not to go too deep into the ear canal. Getting cats to take traditional pills can be a rather arduous labor of love. So, be sure to put on a pair of gloves before administering the transdermal gel. Before applying the transdermal gel, check that the area is clean. So how are transdermal gels administered? Prednisone Tablet for Dogs and Cats at PetSmart. Shop all dog rx medication online.
