Apr 2, - It won't make your insomnia worse. I am in the same boat as you. I just started the lexapro for very bad side effects. i was battling insomnia and getting 3 to 4 hours of sleep at night. I started taking it at night with the 5 mg and also added in a little benadryl. I did wake up a couple of times but went right back to sleep. Does Lexapro 10mg make you feel high when you. Since I started taking it my anxiety has decreased, I have the focus and desire to do things, and (most importantly) I SLEEP. I get a solid 8 hours but I In general it makes me calm, less reactive, smile and sing like I used to. Saved my . If you notice your depression has intensified, and you are on Lexapro, please get help." I got off the escitalopram and back on my original med and within a day felt wonderful with no side effects. Make sure your doctor doesn't switch you to a med that doesn't address the particular problem that is creating your anxiety, If you have continuing severe side effects, call your doctor. I'm so glad I did." Jul 31, - Lexapro is a brand name for the generic drug escitalopram. Unusual excitement; Hallucinations, which means seeing things or hearing voices that do not exist; Fever; Confusion; Fast or irregular heartbeat Lexapro can also make you feel tired and can affect your judgment, thinking, and motor skills. I take 20mg Lexapro for anxiety and it makes me so tired. Does Lexapro make anyone else tired and what do you do about it? Its the only med that has worked for me, but all I do is sleep and I have. Lexapro is available in tablet form. The recommended adult dose of Lexapro is 10 mg once daily. Do not use escitalopram if you are using an MAO inhibitor such as isocarboxazid (Marplan), tranylcypromine (Parnate), phenelzine (Nardil), rasagiline (Azilect), or selegiline (Eldepryl, Emsam). SSRI antidepressants may cause. Find patient medical information for Lexapro Oral on WebMD including its uses, side effects and safety, interactions, pictures, warnings and user ratings. Read the Medication Guide and, if available, the Patient Information Leaflet provided by your pharmacist before you start taking escitalopram and each time you get a refill.

Hi again Justine, in reply to you, i take my escitalopram in the morning when i get up with my breakfast or a glass of milk if i dont feel like breakfast. i would agree with Karin in that this is the gentlest anti depressant i have had; it doesn't make you feel spaced out or over medicated like some can. i hope you. Escitalopram oral tablet is a prescription drug that's available as the brand-name drug Lexapro. It's also available as a generic drug. Generic drugs usually cost less. In some cases, they may not be available in every strength or form as the brand-name version. Talk to your doctor to see if the generic version will work for you. Lexapro (escitalopram) is a prescription drug used to treat depression and generalized anxiety disorder. Side effects may Short-term studies did not show an increase in the risk of suicidality with antidepressants compared with placebo in adults beyond 24 years of age. You need a prescription to obtain this medication.
