Thus, total hospital charges per patient were less with linezolid treatment than with vancomycin treatment. Healing by primary versus secondary intention after surgical treatment for pilonidal sinus. Fibrin glue for pilonidal sinus disease Internal dressings for healing perianal abscess cavities Aloe vera for treating acute and chronic wounds Topical silver for treating infected wounds. Skin and soft tissue infections such as impetigo, abscesses, ulcers, and surgical site infections are common infections of the skin. Two review authors independently selected trials, assessed risk of bias and extracted data. Further well-designed, independently-funded, RCTs are needed to confirm the available evidence. No new trials were identified for this first update. We performed subgroup analyses according to age, and whether the infection was due to MRSA. Linezolid was associated with a significantly better clinical RR 1. Linezolid and vancomycin are antibiotics that are effective in treating skin and soft tissue infections, particularly infections caused by bacteria that have developed resistance to some antibiotics. This review identified nine RCTs , with a total of participants, and compared treatment with linezolid against treatment with vancomycin for skin and soft tissue infections. For this first update of this review we conducted searches of the following databases: Although inpatient treatment with linezolid cost more than inpatient treatment with vancomycin per day, the median length of hospital stay was three days shorter with linezolid.OBJECTIVES: To evaluate the potential treatment cost impact for the Quebec health care system of linezolid versus vancomycin for MRSA-related cSSSI therapy, using a net impact analysis approach.?Abstract ?METHODS ?RESULTS ?DISCUSSION. Cost comparison of linezolid versus vancomycin for treatment of complicated skin and skin-structure infection caused by methicillin-resistant Staphylococcus aureus in Quebec. Pettigrew M(1), Thirion DJ, Libman M, Zanotti G. Author information: (1)Symbiose Partenariat Strategique Inc, Universite de Montreal;. Clin Ther. Aug;28(8) Cost-effectiveness analysis of linezolid compared with vancomycin for the treatment of nosocomial pneumonia caused by methicillin-resistant Staphylococcus aureus. Mullins CD(1), Kuznik A, Shaya FT, Obeidat NA, Levine AR, Liu LZ, Wong W. Author information: (1)Pharmaceutical. Few industry-independent studies have been conducted to compare the relative costs and benefits of drugs to treat methicillin-resistant Staphylococcus aureus (MRSA) infection. We performed a stochastic cost-effectiveness analysis comparing two treatment strategieslinezolid versus trimethoprim-sulfamethoxazole plus. We previously evaluated the cost-effectiveness of linezolid versus vancomycin for the management of MRSA cSSSIs [9]. Although inpatient intravenous (IV) vancomycin therapy with transition to outpatient IV therapy was determined to be the most cost-effective strategy, for payers with a higher willingness-to-pay threshold. Jun 8, - Price and cost have different magnitudes, and clinical efficacy should always be considered in the decision-making process. Our objective was to determine whether linezolid treatment was more cost-effective than vancomycin for treating VAP-MRSA. METHODOLOGY: Elaboration of an economic model. Modeling the economic impact of linezolid versus vancomycin in confirmed nosocomial pneumonia caused by methicillin-resistant Staphylococcus aureus. Dipen A Patel.; Andrew F Shorr.; Jean Chastre.; Michael Niederman.; Andrew Simor.; Jennifer M StephensEmail author.; Claudie Charbonneau.; Xin Gao and; Dilip. Objective: To examine the cost-effectiveness of vancomycin versus linezolid in the empiric treatment of nosocomial pneumonias incor- porating results from a recent prospective, double-blind, multicenter, controlled trial in adults with suspected methicillin-resistant Staph- ylococcus aureus (MRSA) nosocomial pneumonia. population, linezolid appears to be cost-effective from Chinese payers' perspective when compared to vancomycin in treating patients with nosocomial pneumonia caused by MRSA. PIN ECONOMIC EVALUATION OF FLUOROQUINOLONE-BASED REGIMENS FOR THE. TREATMENT OF COMMUNITY-ACQUIRED. By Ed Susman SAN FRANCISCO, CA -- October 11, -- Oral linezolid costs more, but outpatient treatment with this drug over 35 days actually costs an.
