It has been reported that babies born to pregnant women who have taken medications of this kind during the last trimester of pregnancy may be adversely affected. How does this medication work? If you are over 65, discuss with your doctor whether any special monitoring is required. If you are concerned about side effects, discuss the risks and benefits of this medication with your doctor. Decreased liver function can cause this medication to build up in the body, causing side effects. Before you begin using a medication, be sure to inform your doctor of any medical conditions or allergies you may have, any medications you are taking, whether you are pregnant or breast-feeding, and any other significant facts about your health. If you experience these side effects or notice them in a family member who is taking this medication, contact your doctor immediately. Since caffeine, alcohol, the nicotine from cigarettes, or street drugs can affect the action of many medications, you should let your prescriber know if you use them. If you have not discussed this with your doctor or are not sure why you are taking this medication, speak to your doctor. Not Just Feeling Blue. Talk to your doctor about whether you should continue breast-feeding. Because this medication is removed from the body by the kidney and liver, seniors may be at an increased risk of side effects, including seizures, if they use this medication. For the treatment of depression, the full effects of the medication may not be seen until after several weeks of treatment. If you have heart problems, discuss with your doctor how this medication may affect your medical condition, how your medical condition may affect the dosing and effectiveness of this medication, and whether any special monitoring is needed. Bupropion passes into breast milk. An interaction between two medications does not always mean that you must stop taking one of them. The safety of bupropion during pregnancy has not been established. Always seek the advice of your physician or other qualified health provider with any questions you may have regarding a medical condition. Many medications can cause side effects. Bupropion may affect the mental or physical abilities needed to drive or operate machinery.
