Half-life of drug is 3 hours. An antiemetic effect, both by the apomorphine test and the veriloid test, has been demonstrated. Overdose and treatment Signs and symptoms of overdose include excessive sedation and hypotension; seizures may occur. HydrOXYzine is not a cortical depressant, but its action may be due to a suppression of activity in certain key regions of the subcortical area of the central nervous system. Serum levels peak in 2 to 4 hours. For recent oral ingestion, empty gastric contents through emesis or lavage. Contraindications and precautions Contraindicated in patients hypersensitive to drug and during early pregnancy. Pharmacological and clinical studies indicate that hydrOXYzine in therapeutic dosage does not increase gastric secretion or acidity and in most cases has mild antisecretory activity. Sedation and other clinical effects are usually noticed in 15 to 30 minutes. Pharmacodynamics Anxiolytic and sedative actions: Metabolites are excreted primarily in urine; small amounts of drug and metabolites are found in feces. HydrOXYzine is rapidly absorbed from the gastrointestinal tract and hydrOXYzine's clinical effects are usually noted within 15 to 30 minutes after oral administration. Barbiturates, opioids, tranquilizers, other CNS depressants: Available forms Available by prescription only hydroxyzine hydrochloride Injection: Hydroxyzine produces its sedative and antianxiety effects through suppression of activity at subcortical levels; analgesia occurs at high doses. Rx drug information, pharmaceutical research, clinical trials, news, and more. Preoperative and postoperative adjunctive sedation, to control emesis, adjunct to asthma treatment. Sedative effects can last for 4 to 6 hours, and antihistaminic effects can persist for up to 4 days. It also may cause false-negative skin allergen tests by attenuating or inhibiting the cutaneous response to histamine. Primary skeletal muscle relaxation has been demonstrated experimentally. In addition, hydroxyzine hydrochloride crosses the blood-brain barrier and acts on the histamine H1-receptors in the central nervous system. (NCI05). Pharmacology from NCI. Hydroxyzine is a first generation antihistamine that is used largely for symptoms of itching, nausea, anxiety and tension. Hydroxyzine has not been. 13 Jun Hydroxyzine Hydrochloride Injection USP, Liquid, 50 mg, Intramuscular, Sandoz Canada Incorporated, . Not applicable, Canada Canada Pharmacology. Indication. For symptomatic relief of anxiety and tension associated with psychoneurosis and as an adjunct in organic disease states in. Hydroxyzine, sold under the brand names Atarax and Vistaril among others, is a first-generation antihistamine. It was first synthesized by Union Chimique Belge in and was marketed by Pfizer in the United States later the same year and is still widely used today. Because of its antihistamine effects, it can be used for. Learn about Atarax (Hydroxyzine Hydrochloride) may treat, uses, dosage, side effects, drug interactions, warnings, patient labeling, reviews, and related medications. Hydroxyzine is derived from a group of drugs called diphenylethanes. Although classified as a histamine (H1) blocker, hydroxyzine also possesses sedative, antiemetic, antispasmodic, and anticholinergic properties. Two forms of the drug are available: hydroxyzine hydrochloride (Atarax) and hydroxyzine pamoate (Vistaril). Hydroxyzine HCl (Hydroxyzine) drug information & product resources from MPR including dosage information, educational materials, & patient assistance. Hydroxyzine HCl Rx. Add Drug To My List Compare to related Drugs View/edit/ Compare drugs in my list Pharmacological Class: Antihistamine. Atarax 25mg Film-coated tablets. 2. Qualitative and quantitative composition. Hydroxyzine hydrochloride 25mg. Excipient(s) with known effect: Lactose (anhydrous) mg. For the full list of excipients, see section 3. Pharmaceutical form. 25mg film-coated tablets, coloured green and coded on one side with 'AX'. 4. Antihistaminic and bronchodilator activities have been demonstrated experimentally and confirmed clinically. An antiemetic effect, both by the apomorphine test and the veriloid test, has been demonstrated. Pharmacological and clinical studies indicate that hydroxyzine at therapeutic dosage does not increase gastric. Medscape - Pruritis, sedation, anxiety-specific dosing for Vistaril (hydroxyzine), frequency-based adverse effects, comprehensive interactions, contraindications, pregnancy & lactation schedules, and cost information.
