Children older than two must be dosed based on weight. Give them the dose about 30 minutes before the plane takes off. When the drug is meant to treat allergies, and also available in a pediatric formulation, why is it not suitable for infants? To minimize the time Scout had to spend strapped into her car seat aboard the flying tube of boredom, this is how Kate and I handled the boarding process: Sticking a pacifier in their mouth is a great tactic as well. Some parents use the over-the-counter medication to create drowsiness in their babies, especially when they are traveling. Wendy Sue Swanson, M. What are your solutions for allergies in babies? The back of plane is also less affected by turbulence, helping your child sleep more soundly. It was our second family vacation with kids, and our first with Scout, who is a little over a year old. This has several distinct advantages. But neither was my ride outfitted like a spacious s TWA airliner. If your baby has an allergy or a cold, home remedies may be the best solution, but only after you confirm with your doctor. Austin, MD for his advice, and this is what he told me:. According to the US Food and Drug Administration FDA , children less than two years should not be administered cough and cold medicine consisting of decongestants ephedrine, phenylephrine or pseudoephedrine, and antihistamines diphenhydramine found in Benadryl , chlorpheniramine, or brompheniramine 1. It might soothe your baby but is Benadryl safe for infants? We found that giving Gus who is 3 Benadryl was unnecessary, as he just wanted to stay awake and do his workbooks and play on the iPad. An online poll was conducted in regarding the administration of medicine to children. Benadryl can have an opposite effect too!Sep 21, - The Ask Dr. Sears site addresses this issue. While they do not recommend Benadryl (diphenhydramine) for infants under 12 months, and at the very bottom of the page, they are kind enough to break down dosage per weight of the child. For example: lbs can receive 3/4 tsp (ml) every hours. Walgreens Wal-Dryl Children's Allergy Relief, Liquidfl oz. Benadryl Children's Allergy Liquid Cherry oz. Children 6 to 11 years use 5 mL (1 tsp) to 10 mL (2 tsp). Jan 25, - If your infant is having an allergic reaction, has cold symptoms, or you just want them to get some sleep, there are several reasons you should avoid Benadryl. Check the medication label carefully for the concentration amount and use the measuring device that was provided with the product in order to correctly dose the There are many conflicting opinions on whether it is ethical to sedate a baby using Benadryl for long periods of travel via car, airplane or public transportation. First made publically available by prescription in , the popular antihistamine Benadryl, an allergy and antiitch medicine formulated for both for adults and children, is today available overthecounter for oral or topical use. Manufactured by McNeil Consumer Healthcare, a subsidiary of Johnson & Johnson, the brand. There have been instances of diphenhydramine overdose in infants resulting in serious complications and even death. Pediatricians are often reluctant to give out dosage information freely because many will abuse baby Benadryl in order to put babies to sleep. No matter how exhausted and frustrated you may be, Benadryl. Before you give baby any meds, always check in with your pediatrician. Benadryl should not be given to children under the age of 2. The FDA says children under 2 should never be administered cough and cold medicine containing the decongestants ephedrine, pseudoephedrine or phenylephrine, and the antihistamines.
