Some drugs may be legally classified as over-the-counter i. This page was last edited on 20 February , at While they are legally classified as OTC drugs, they are typically stored behind the counter and are sold only in stores that are registered with their state. OTC drugs are usually also required to have little or no abuse potential, although in some areas drugs such as codeine are available OTC usually in strictly limited formulations or requiring paperwork or identification to be submitted during purchase. By using this site, you agree to the Terms of Use and Privacy Policy. For example, phenylpropanolamine was removed from sale in the United States over concern regarding strokes in young women. Retrieved from " https: Thus, an OTC drug product is allowed to be marketed either 1 pursuant to an FDA monograph or 2 pursuant to an NDA for products that do not fit within a specific monograph. Drug Facts labels include information on the product's active ingredient s , indications and purpose, safety warnings, directions for use, and inactive ingredients. Retrieved 19 September As a general rule, over-the-counter drugs have to be used primarily to treat a condition that does not require the direct supervision of a doctor and must be proven to be reasonably safe and well tolerated. If you are on a personal connection, like at home, you can run an anti-virus scan on your device to make sure it is not infected with malware. Examples of these include some sleep aid tablets such as Nytol , human deworming tablets such as Mebendazole , painkillers with small amounts of codeine up to The drugs are usually on the shelves, and the store also sells items like toys, gadgets, perfumes and homeopathic products.Feb 5, - Ibuprofen Mg Is A Controlled Substance - Topics (Showing results 1 - 2 of 2) gabapentin and klonopin: I take mg of gabapetin a day, 1 mg klonopin for sleep.
