However, the symptoms persisted in some cases; therefore, ongoing monitoring and supportive care should be provided until symptoms resolve. These postmarketing reports have included changes in mood including depression and mania, psychosis, hallucinations, paranoia, delusions, homicidal ideation, hostility, agitation, aggression, anxiety, and panic, as well as suicidal ideation, suicide attempt, and completed suicide. Advise patients and caregivers that the patient should stop taking FORFIVO XL and contact a healthcare provider immediately if agitation, depressed mood, or changes in behavior or thinking that are not typical for the patient are observed, or if the patient develops suicidal ideation or suicidal behavior. Patients currently treated with other bupropion products may be switched to Forfivo XL if they are receiving: Psychosis and Other Neuropsychiatric Reactions Depressed patients treated with bupropion have had a variety of neuropsychiatric signs and symptoms, including delusions, hallucinations, psychosis, concentration disturbance, paranoia, and confusion. There are reports of arthralgia, myalgia, fever with rash, and other symptoms of serum sickness suggestive of delayed hypersensitivity. By using this offer you agree that you will not submit a claim for the prescription to any government payer. You can titrate to higher doses without adding more pills. These trials did not show an increase in the risk of suicidal thoughts and behavior with antidepressant use in subjects over age 24; there was a reduction in risk with antidepressant use in subjects aged 65 and older. The use of this card is subject to applicable state and federal law. Observe patients for the occurrence of neuropsychiatric adverse events. The risk of seizures is also related to patient factors, clinical situations, and concomitant medications that lower the seizure threshold [see Warnings and Precautions in full prescribing information]. If any part of your prescription is paid for by a nongovernmental third-party payer, you attest to having disclosed this offer to your third-party payer. It is not known whether the mg dose needed to achieve initial response is needed for maintenance treatment Patients should be periodically reassessed to determine the need for a maintenance treatment and the appropriate dose for such patients. In patients of all ages who are started on antidepressant therapy, monitor closely for worsening and for emergence of suicidal thoughts and behaviors. Data from a comparative trial of bupropion HCl, nicotine transdermal system NTS, and placebo as an aid to smoking cessation suggest a higher incidence of treatment emergent hypertension in patients treated with the combination of sustained-release bupropion HCl and NTS. The patient is responsible for reporting receipt of this offer to any health plan, health insurer, or third-party payer as may be required. Advise families and caregivers of the need for close observation and communication with the prescriber. Indication: WELLBUTRIN XL (hydrochloride extended-release tablets) is a prescription medicine used to treat adults with a certain type of depression called major depressive disorder, and for the prevention of autumn-winter seasonal depression (seasonal affective disorder).
