Information and statements regarding dietary supplements and many other health conditions on this site have not been evaluated by the Food and Drug Administration and are not intended to diagnose, treat, cure, or prevent any disease and may be for commercial. Call your doctor immediately if the person being treated develops symptoms such as high fever; stiff muscles; shaking; confusion; sweating; changes in pulse, heart rate, or blood pressure; or muscle pain and weakness. If you have or suspect that you have a medical problem, promptly contact your health care provider. Ryan Haight Act Disclosure. The information contained in this page is intended for U. How to Dispose off used Insulin Needles? Treatment should be stopped if the person being treated has NMS. If the person being treated has diabetes or risk factors such as being overweight or a family history of diabetes, blood sugar testing should be performed at the beginning and throughout treatment. This condition can develop after a brief period of therapy at low doses, although this is much less common. You should read carefully all correct product packaging and follow the instructions. Some side effects seen with these medications include the absence of a menstrual period; breasts producing milk; the development of breasts by males; and the inability to achieve an erection. If signs of high blood sugar or diabetes develop, such as being thirsty all the time, going to the bathroom a lot, or feeling weak or hungry, contact your doctor. Prices are valid online only and not guaranteed. Blood levels of prolactin remain elevated with continued use.
