Epub Apr The effects of citalopram and fluoxetine on sexual behavior in healthy men: evidence of delayed ejaculation and unaffected sexual desire. A randomized, placebo-controlled, double-blind, double-dummy, parallel group study. I didn't realise that Citalopram is sometimes used as an effective treatment for premature ejaculation. . Premature ejaculation is a big problem that affects a lot of men. My doctor says it can be addressed with dosage changes if it doesn't pass as a temporary side effect. Mine passed in about a week. No problems now. Mar 2, - 3 Answers - Posted in: depression, obsessive compulsive disorder - Answer: Ejaculatory disorder (primarily ejaculatory delay) (6%) and impotence (3%). Unusual and rare sexual side effects include priapism (or constant erection), clitoral priapism, painful ejaculation, penile anesthesia, increased libido and/or spontaneous orgasm with yawning. 2) How often do sexual side effects of antidepressant treatment occur? Antidepressant-induced sexual dysfunction is fairly common. rawr! So, I started taking Citalopram just two days ago, meaning I've had two doses, and I am already unable to ejaculate. I have quite good control usually over this, but I have attempted to 'bash one out' three times in the past three hours, and nothing, I cannot even get close. I am unsure as to whether this. Guys.I just started Celexa yesterday and am tapering off of Paxil. The paxil made it for past two rubeninorchids.com usual side effects like dizziness,insomnia and tiredness seemed fine,but the lack of ejaculation was so depressing! . The more sexually problematic antidepressants include: Celexa. Libido loss, delayed or no ejaculation in men, no orgasm in women, with possible erection problems. Desyrel. Priapism, with possible delayed or no ejaculation in. Nov 14, - I find since I've been on Citalopram I get VERY strong erections and take forever to reach ejaculation. Doesn't sound like a complaint does it? My wife's delighted!! However, 'Good Wood' if fine if the time's right . not if you're wearing shorts in Tesco!!! When the missus is wearing the old lace it's great, best. Aug 21, - Okay, It's been over a week since I had sex/ejaculated. I'm feeling aroused and can't wait to have sex with my girlfriend. I'm taking the SSRI Citalopram/Celexa 20mg. Why does my body take a week before it feels ready to ejaculate/have sex or masturbate?? Instead of a 30 min refractory period I have 7. My big sister is also on Citalopram and although she's not one to tell me everything, I don't think the drug affects her as much as it does me. You see citalopram in small doses (I'm guessing 10mg as my sis's doctor told her 10mg isn't classed as a medical dose) is used to treat premature ejaculation.
