If a patient shows no clinical improvement after the treatment period, the diagnosis should be redetermined. Nevertheless, a decision should be made whether to discontinue nursing or discontinue the drug, taking into account the importance of the drug to the mother. Clinical improvement may be seen fairly soon after treatment is begun; however, candidal infections and tinea cruris and corporis should be treated for two weeks in order to reduce the possibility of recurrence. In vitro studies suggest that ketoconazole impairs the synthesis of ergosterol, which is a vital component of fungal cell membranes. Ketoconazole should be used during pregnancy only if the potential benefit justifies the potential risk to the fetus. Available for Android and iOS devices.
