Often a short stay in hospital is necessary until the calcium levels have been reduced. What are the possible side effects of tamoxifen? If you are taking warfarin let your doctor know straight away. Many women take tamoxifen for 5 years but an alternative is to take it for years then switch to an aromatase inhibitor for the remaining adjuvant cause. What are they taken for? Some women find that one brand of tamoxifen causes more or less side effects than another, so if you experiencing side effects you may wish to ask your doctor if you can change to a different brand. If taken for longer than 5 years, in some cancer centres women are given regular gynaecological check-ups to detect signs of endometrial cancer. In the metastatic setting they may even be more effective than tamoxifene equal in effect to tamoxifen and trials are underway in the adjuvant setting. It comes in different strengths; 10mg, 20mg and 40mg. It is also thought that tamoxifen may help to prevent bone loss which can reduce the risk of osteoporosis thinning of the bone in some women. Stopping the body's oestrogen reaching the tumour can cause the cancer cells to stop growing and in some cases shrivel up and die completely self destruct - apoptosis. I've been on the Teva brand since I first began taking Tamoxifen and am doing very well on it. My only side effect is occasional night sweats. That's it. I had heard from the ladies here that switching between brands can cause all sorts of side effects to rise up, so I requested my pharmacy only fill my Brands of Tamoxifen w/ least SE. I have been researching this as I am about to start on Tamoxifen. The active ingredient is exactly the same in all of them but as someone else mentioned the bulking ingredient or coating is different. Nolvadex-d is a brand of tamoxifen that for most people reduces the side effects giving far fewer hot flushes Brands of Tamoxifen - Breast Cancer Care Forum - Jan 28, - I recently got my refill and the manufacture says Actavis, however, I was shown the Mayne bottle where they keep all their Teva pills and all the pills have the same code # as the Actavis I was given. Regardless of the brand name, the # on the pill should be the true identifier. How long were you on this pill. There is no simple answer and am convinced that the problem lies with excipients rather than the active drug itself which must comply with certain rubeninorchids.comunately there is no easy way of ensuring that you get the Tamoxifen made by the same company each time you present a rubeninorchids.com you Does a change in brand of tamoxifen make any. Apr 2, - update: I wrote this post in early while figuring out which brand of Tamoxifen worked best for me. I have since also adjusted my a different brand. Don't worry, they both contain the same amount of the active drug, it will be just as effective. Or perhaps it is all in my head. So when March rolled. May 31, - I had been on the TEVA manufactured tamoxifen for 9 months and had no problems. When my prescription plan changed, the pharmacy filled it with the Mylan generic. All of a sudden I started experiencing hot flashes which I had not had previously. I thought it was odd because the active ingredients in both. Aug 10, - Finding 1: 6 different manufacturers of the generic brand of Tamoxifen (Watson, Mylan, Teva, Barr, Apotex,. We all take a generic version. Each of the 6 versions all have the same active ingredient but each have different inactive ingredients. The first inactive ingredient is sodium ding, ding, ding! Dec 1, - Tamoxifen I bet you thought that one packet of Tamoxifen was much the same as the next. So did I, and it seems a reasonable assumption. However I have taken two brands of Tamoxifen and haven't suffered nausea with either and they are made by Wockhardt UK Limited and MA Holder APS Limited. Jul 16, - RESULTS: 63 patients (38%) reported a switch between generic tamoxifen. 59% of all patients experienced side effects associated with tamoxifen treatment of which 53% were severe. Patients experiencing differential symptoms dependent on tamoxifen brand reported more severe side effects (p = ). Tamoxifen also may be used to reduce the risk of developing breast cancer in women who have a high risk of developing breast cancer. Women at high risk for developing breast cancer are at least 35 years of age and have a combination of risk factors that make their chance of developing breast cancer % or more over.
