Treatment of the infection may not immediately result in normalization of pigment to the affected sites. In susceptible individuals the condition is often recurrent and may give rise to hyperpigmented or hypopigmented patches on the trunk which may extend to the neck, arms and upper thighs. While the differences in the rates of successful response between either of the two active treatments and placebo were statistically significant, the difference between the two active regimens was not. To view content sources and attributions, please refer to our editorial policy. For topical application only. Because these reactions are reported voluntarily from a population of uncertain size, it is not possible to reliably estimate their frequency. Although tinea versicolor is not contagious, it may recur because the organism that causes the disease is part of the normal skin flora. The rate of recurrence of infection is variable. Nizoral Shampoo Generic Name: Ketoconazole is not detected in plasma after chronic shampooing on the scalp. Please enter a valid email address. IE 8 does offer TLS 1. Apply the shampoo to the damp skin of the affected area and a wide margin surrounding this area. It is postulated, but not proven, that the therapeutic effect of ketoconazole in tinea pityriasis versicolor is due to the reduction of Pityrosporum orbiculare Malassezia furfur and that the therapeutic effect in dandruff is due to the reduction of Pityrosporum ovale. If a reaction suggesting sensitivity or chemical irritation should occur, use of the medication should be discontinued.
