This prior approval to prescribe grants the doctor the Authority to prescribe the desired medicine and have it funded under the PBS. Wear sunscreen and wear protective clothing to minimize exposure to sunlight. XERESE is for cold sores on lips and around the mouth only and should not be used in eyes, mouth, nose or on genitals. Topical medications can either be OTC or prescription but only Xerese combines an antiviral drug and an anti-inflammatory drug. Prescription medications that are indicated to treat cold sores all contain antivirals, which attack the HSV-1 virus itself. Xerese is the first and only cold sore medication that combines an antiviral drug acyclovir and an anti-inflammatory drug hydrocortisone in one easy-to-apply cream. You also have choices on how you use your treatment. So, they do not block the HSV-1 virus from replicating copying itself. In clinical studies conducted by the Department of Infectious Diseases at Regional Hospital in Varese, Italy, acyclovir inhibited viral shedding. In an analysis of five trials involving patients, Zovirax use resulted in less viral shedding at the end of therapy, however, this antiviral did not offer consistent or significant benefit. Treatment is most effective when started within 48 hours after onset of rash. Begin therapy within 72 hours of onset of symptoms for shingles herpes zoster. This drug inhibits viral reproduction by interfering with the production of DNA in the virus. Breast-feeding is compatible with this drug. This is not required if you have a doctor's prescription. Use exactly as directed by your healthcare provider. Description Acyclovir belongs to a class of drugs known as antivirals.

Oct 11, - I was going to say the same thing as Kaismama. Abreva will help a cold sore heal faster but it is not the same thing as Zovirax or acyclovir. Abreva is not an antiviral like acyclovir. For that, you need a prescription. I wish they would make acyclovir topical OTC. If you have genital lesions or multiple lesions. Jump to Medication Uses - USES: This medication is used to treat "cold sores/fever blisters" (herpes labialis). It can speed up healing of the sores and decrease symptoms (such as tingling, pain, burning, itching). Acyclovir belongs to a class of medications known as antivirals. It works by stopping the growth of the virus ?How To Use ?Side Effects ?Precautions ?Drug Interactions. Acyclovir in pregnancy should only be considered if your doctor thinks you need it. Avoid strong sunlight and sunbeds, and use a sun cream with a high sun protection factor until you know how your skin reacts. Acyclovir may cause your skin to become more sensitive to sunlight. Acyclovir should be avoided if you are. It can be taken to treat or prevent genital herpes outbreaks and is a prescription-only treatment. Although there is no cure for herpes and the virus will remain in your body, taking aciclovir can stop or reduce the unpleasant symptoms. In order to buy Aciclovir, you need a prescription. When you place an order with us, one of.

Jun 6, - Topical creams and ointments like Zovirax (acyclovir) and Denavir (penciclovir) are available and have been studied for oral herpes (herpes labialis). Turns out they don't work so well, are really expensive and usually require frequent daily applications. Now, there is a new topical medication for oral herpes. Acyclovir Topical ointment 5pct Drug Medication Dosage information. Learn about the reported side effects, related class drugs, and how these medications will affect your daily lifestyle. Visit rubeninorchids.com for more details. Oct 28, - Aciclovir is an antiviral agent. Aciclovir cream works by attacking the herpes simplex virus, of which there are two types. Mar 5, - Now, I need to clarify a key point. Actavis and two other generic-drug makers, Mylan and Amneal Pharmaceuticals, market a generic version of Zovirax ointment. There's no generic version of the Zovirax cream prescribed for Makichuk. What's the difference? "There really isn't any," said Dr. Boris Zaks. While OTCs may help some people, others will need a prescription-strength treatment. Prescription medications require you to first see your doctor. Prescription medications that are indicated to treat cold sores all contain antivirals, which attack the HSV-1 virus itself. The type of antiviral medication may be different, and can. There are two topical antiviral medications prescribed for the treatment of oral HSV symptoms: acyclovir ointment (brand name Zovirax) and penciclovir cream (brand name Denavir). Both work to speed up the healing process and reduce the viral activity. These topical drugs are put directly on the lesions themselves, but.
