The four melatonin trials had a total of participants. Findings of this review We searched the medical literature up to March for all randomised trials that compared any medicine used for treating sleep problems in people with dementia with a fake medicine placebo. The risk of bias in the ramelteon study was unclear due to incomplete reporting. Shortcomings of this review Although we searched for them, we were unable to find any trials of other sleeping medications that are commonly prescribed to people with dementia. These behaviours cause a lot of stress to carers, and may be associated with earlier admission to institutional care for people with dementia. You may also be interested in: No effect was seen on daytime sleep, cognition, or ADL. In this updated Cochrane review , we tried to identify the benefits and common harms of any medicine used to treat sleep problems in people with dementia. Two review authors independently extracted data on study design, risk of bias , and results from the included study reports. From single studies, we found no difference between melatonin and placebo groups for sleep efficiency, time awake after sleep onset, or number of night-time awakenings.

Apr 26, - 13 Answers - Posted in: ambien, insomnia, sleep disorders, trazodone, sleep - Answer: i assure you that trazodone will work MUCH better for you! i How does trazodone work on the brain to put you to.
