The parent compounds are difficult to detect accurately since they are metabolized very rapidly after treatment. Furthermore, the inappropriate use of antibiotics in animal husbandry and food production promotes the multi-drug resistance of pathogen bacteria for antibiotics used in human medicine. In addition to veterinary application, bacitracin can be used as antimicrobial growth promoter in animal husbandry. The majority of quinolones belong to the subgroup of fluoroquinolones, which have a fluoro-group attached at the central ring system, typically at the 6th position. The fluoroquinolones belong to the so called second generation quinolones. You might also be interested in. Antibiotic residues in food of animal origin such as milk, eggs or meat represent a potential health risk to the consumer. The chemical structure of chloramphenicol has 8 different stereoisomers, of which only one RR-p-CAP is biologically active. They are used frequently in veterinary medicine especially for cattle, pigs and chicken. No safe residue level could be established for these side effects. Long term animal experiments have shown that the parent compounds and their metabolites have carcinogenic and mutagenic characteristics. Antibiotic residues bear a risk for the production process safety and consequently also an economic risk, as they inhibit biotechnological production processes involving microorganisms such as starter cultures in the dairy industry. RIDASCREEN Chloramphenicol is a competitive enzyme immunoassay for the quantitative analysis of chloramphenicol in milk, milk powder and dairy products, honey and royal jelly, meat, fish, shrimp, eggs, urine (also RIDA Chloramphenicol Dotierlosung/Spiking Solution Email link, sales@rubeninorchids.com RIDASCREEN. . Chloramphenicol Fur weitere Fragen stehen Ihnen gerne zur Verfügung: Please contact for questions and further information: Zentrale/Switchboard. Tel./Phone: +49 (0) 61 51 - 81 Auftragsannahme/Order department. Fax: +49 (0) 61 51 - 81 E-Mail: orders@rubeninorchids.com Marketing. Intended use: RIDA Chloramphenicol Spiking Solution can be used for the production of positive control samples suitable for the validation (e.g. determination of the recovery rate) of the RIDASCREEN Chloramphenicol test (R). Chloramphenicol in buffer, ready to use. Email link, sales@rubeninorchids.com RIDASCREEN Chloramphenicol ist ein kompetitiver Enzymimmunoassay zur quantitativen Bestimmung von Chloramphenicol in Milch, Milchpulver und Milchprodukten, Honig und Gelee Royal, Fleisch, Fisch, Shrimps, Eiern, RIDA Chloramphenicol Dotierlosung/Spiking Solution E-Mail Link, info@rubeninorchids.com Antibiotic residues in food of animal origin such as milk, eggs or meat represent a potential health risk to the consumer. Therefore, R-Biopharm offers a broad portfolio of different test systems for the analysis of antibiotic residues. Antibiotics are naturally formed metabolites derived from fungi or bacteria. Substances that do. May 9, - Chloramphenicol is an antibiotic used for the treatment of various bacterial infections. The infographic shows the risk of antibiotic residues in livestock. Chloramphenicol. Enzymimmunoassay zur quantitativen Bestimmung von. Chloramphenicol. Enzyme immunoassay for the quantitative analysis of chloramphenicol. Art. No.: R In vitro Test. Lagerung bei 2 - 8 C. Storage at 2 - 8 C. R-Biopharm AG, Darmstadt, Germany. Tel.: +49 (0) 61 51 81 / Telefax: +49 (0) Catalog Number: R Components: 1 x Microtiter plate with 96 wells (12 strips with 8 removable wells each) coated with capture antibodies - 6 x Chloramphenicol standard concentrates, ml each 0 ppt (zero standard), ppt, ppt, ppt, ppt, ppt chloramphenicol in aqueous solution. Immunoassays for Analysis of Antibiotics Quantitative Competitive Enzyme Immunoassays 4 Kits for the Analysis of Chloramphenicol, Streptomycin, Sulfamethazine, Tetracyclines. R-Biopharm has developed 4 competitive enzyme immunoassays for the quantitative analysis of antibiotics: Ridascreen Chloramphenicol. Size and Principle 96T Competitive Enzyme immunoassay Total Assay time 60 mins Samples Urine, Muscle.
