The warning about tendon rupture and other effects is in the guides, which take the place of the package inserts that come with other prescriptions. There is no dispute that antibiotics save lives, but the Centers for Disease Control and Prevention estimates that up to 50 percent of prescriptions for these drugs may be unnecessary or ineffective because they are written for colds, flu or other viral conditions that do not respond to antibiotics. Giants New York Giants. The pain was cyclical, at times striking her biceps, knees and Achilles tendons. Dannelly was 41 when he died in In , health-care providers prescribed million courses of antibiotics , or prescriptions for every 1, people seen in outpatient settings in the United States. So how dangerous are fluoroquinolones? Beatrice Golomb, a professor of medicine at the University of California at San Diego, says that fluoroquinolones can be far more disabling than other antibiotics. Fluoroquinolone labeling required by the FDA warns of the potential for disabling peripheral neuropathy or permanent nerve damage to the arms and legs, eye disorders, psychiatric and nervous system disorders, and seizures. FDA and other health authorities, we incorporate new data into our product labels so doctors and patients can make informed decisions. It can damage tendons, cartilage, bone and muscle, and affect the cardiovascular and central nervous systems. Flipped upside down, he said, because of crippling side effects he experienced after taking the popular antibiotic Ciprofloxacin or Cipro as it is more commonly known. Several studies document fluoroquinolone misuse. One, reported in the journal BMC Infectious Diseases , found that almost a third of the fluoroquinolone regimens given to patients at a Cleveland hospital were for urinary syndromes where antibiotics were not warranted. In a large Italian study , researchers found that patients treated with fluoroquinolones were up to four times as likely to rupture an Achilles tendon as were those who did not get these drugs.
