Measure liquid medicine with a special dose-measuring spoon or cup, not a regular table spoon. Histamine can produce symptoms of sneezing, itching, watery eyes, and runny nose. Because the symptoms of itching and redness in these conditions are caused by histamine acting on the H 1 receptor, blocking those receptors temporarily relieves those symptoms. *J Eur Acad Dermatol Venereol*. Retrieved 21 August To view content sources and attributions, please refer to our editorial policy. Cetirizine acts as a highly selective antagonist of the histamine H 1 receptor. Analogues include cyclizine and hydroxyzine. Jubilant Cadista Pharmaceuticals Inc. Cetirizine crosses the bloodbrain barrier only slightly, and for this reason, it produces minimal sedation compared to many other antihistamines. Insatiable, generalized itching is the most commonly-reported withdrawal side effect, though others have reported severe rebound of original, pre-treatment systems as well, including sneezing and runny nose. Retrieved 9 September Cetirizine's properties of being effective both in the treatment of pruritus itching and as an anti-inflammatory agent make it suitable for the treatment of the pruritus associated with these lesions. Tell your doctor about any unusual or bothersome side effect. If it is almost time for your next dose, wait until then to take the medicine and skip the missed dose. Cetirizine is an antihistamine that reduces the natural chemical histamine in the body. Subscribe to receive email notifications whenever new articles are published.
