High platelet reactivity after clopidogrel administration is associated with increased risk of stent thrombosis and points to the suitability of laboratory monitoring of antiplatelet therapy efficacy in clinical practice. Giancarlo Marenzi and Antonio L Bartorelli. Section 8 Endocrine Pharmacology. Low molecular weight heparin in. About the Companion Website. Yoho MD William R. Recommended articles Citing articles 0. The Role of Platelets in Disease. This superb text offers the reader coverage of all the major pharmacological therapies used in treating the cath lab patient from the practical, personal perspective of those actively involved in interventional cardiology. Arrhythmia management in the cardiac. Under an Elsevier user license. Novel platelet function tests, drugs, blood bank storage methods, and gene therapies have been incorporated into patient care or are in development. Gene Therapy for Platelet Disorders. Ron Waksman, Andrew Ajani. Author links open overlay panel Paul A. Pantelis Diamantouros and E Magnus Ohman. Veterinary Pharmacology and Therapeutics, Tenth Edition is a fully updated and revised version of the gold-standard reference on the use of drug therapy in all major veterinary species. Cellular and physiological actions Prescribed usage Dosages Adverse reactions Cautions Common routes of administration Opening chapters discuss anticoagulation therapies and antiplatelet therapies. Thromb Haemost. Aug;92(2) Pharmacokinetics of clopidogrel after administration of a high loading dose. Taubert D(1), Kastrati A, Harlfinger S, Gorchakova O, Lazar A, von Beckerath N, Schomig A, Schomig E. Author information: (1)Department of Pharmacology, University Hospital, University of Cologne. Oct 15, - The study included patients receiving either a single mg loading dose of clopidogrel (n = 17) or a 75 mg dose (n = 45) for at least 7 days before sample .. Gorchakova O, Lazar A, von Beckerath N, Schomig A, Schomig E. Pharmacokinetics of clopidogrel after administration of a high loading dose. Dec 21, - Pharmacokinetics of clopidogrel after administration of a high loading dose. Article (PDF Available) in Thrombosis and Haemostasis 92(2) September with Reads. Source: PubMed. Cite this publication. Dirk Taubert Adnan Kastrati at Deutsches Herzzentrum Munchen. Adnan Kastrati. To cite this article: Sibbing D, Taubert D, Schomig A, Kastrati A, von Beckerath N. Pharmacokinetics of clopidogrel in patients with stent thrombosis. J Thromb Haemost thrombosis patients the high level of ADP-induced platelet aggregation in the and after administration of a loading dose of mg clopidogrel in patients. The relation of dosing to clopidogrel responsiveness and the incidence of high post-treatment platelet aggregation in patients undergoing coronary stenting. J Am Coll Cardiol, 45, Taubert, D., Kastrati, A., Harlfinger, S., et al. (). Pharmacokinetics of clopidogrel after administration of a high loading dose. Identification of low responders to a mg clopidogrel loading dose in patients undergoing coronary stenting. Thromb Res ; Taubert D, Kastrati A, Harlfinger S, et al. Pharmacokinetics of clopidogrel after administration of a high loading dose. Thromb Haemost ; von Beckerath N. The OPTIMUS-3 study will compare standard doses of prasugrel with high loading doses and maintenance doses of clopidogrel in patients with type II diabetes and coronary artery The platelet inhibitory effects and pharmacokinetics of prasugrel after administration of loading and maintenance doses in healthy subjects. Nov 8, - administration. Optical aggregometry was performed before and 4 hours after administration of clopidogrel. Loading with mg resulted in higher plasma concentrations of the Conclusions Single doses of clopidogrel higher than mg are not associated with an additional significant suppression. In dogs, a dose of either or mg/kg, decreased ADP-induced platelet aggregation occurs for 3 days after discontinuation of drug administration in some dogs and longer than 7 days in others. Effects also persisted in cats for 3 days after administration. At 2 mg/kg orally, q 24 h, clopidogrel significantly suppressed. Initiating Plavix without a loading dose will delay establishment of an antiplatelet effect by several days [see CLINICAL PHARMACOLOGY and Clinical Studies]. ... The Cmax of the active metabolite is twice as high following a single mg clopidogrel loading dose as it is after four days of 75 mg maintenance dose.
