However, if it is clear that your moods do indeed cycle, then the first thing to do is stop the cycling. Don't assume that doubling up is a good idea. Consider the following logic: Your doctor may be able to change your dose, give you another medicine to control the side effects, or try a different medication altogether. Like any drug, bipolar medicines can cause some side effects. Common side effects include: A weekly pillbox can help you see if you've missed a dose. But the FDA has approved some medicines for bipolar depression, too: You may need regular tests to make sure that you're staying healthy. There are exceptions, including especially people who have been on an antidepressant for years and doing well, with no cycling. These side effects can include: Eventually, you and your doctor should be able to find a prescription that works for you.

May 15, - With this post, we continue our biweekly series on medications used to treat bipolar disorder and related symptoms. Over the past weeks, we covered several commonly used SSRI antidepressants, including Prozac, Paxil, Zoloft, Celexa, and Lexapro. This week, we turn our attention to another class. Reviews and ratings for venlafaxine when used in the treatment of bipolar disorder. 52 reviews submitted. With respect to short-term treatment, there is some limited support for the use of risperidone and olanzapine in hypomania and for fluoxetine, venlafaxine and valproate in treating depression. There seems to be considerable agreement that bipolar disorder, including BP II, is commonly underdiagnosed or misdiagnosed.

Dec 15, - The side effects of antidepressants may include an increased risk of mania and bipolar disorder in people with depression.

Nov 8, - If you have bipolar disorder, the right medications can be like a pair of eyeglasses. Bipolar distorts your view of yourself and the world, but the medicine can help you to see things clearly again. Medications are an essential part of a treatment plan. They won't cure you, but they will help you keep your moods. Bipolar-II is a common type of depression. Exact rates are not clear, but it probably affects between in people. Unfortunately there is little public awareness of this condition, which borrows its name from the more well-known bipolar-I disorder. This similarity in names is confusing, since the word bipolar brings to mind. Stopping venlafaxine abruptly may result in one or more of the following withdrawal symptoms: irritability, nausea, feeling dizzy, vomiting, nightmares, headache, and/or paresthesias (prickling, tingling sensation on the skin). Depression is also a part of bipolar illness. People with bipolar disorder who take antidepressants.

Aug 7, - Selective serotonin reuptake inhibitors (SSRIs) and other new antidepressants, such as bupropion and venlafaxine, are generally considered to be the first-line choices for the depressed phase of bipolar disease. Other medications such as tricyclic antidepressants (TCAs), and monoamine oxidase.
