Please help I don't know what to do! The fact that these symptoms have occurred right when I've started a new batch is more than coincidence so I was wondering if they'd changed the recipe? Keeping my fingers crossed for that to happen on my part.. My daughter is overdue for heart surgery and I am just hanging in there waiting for a date which could be any day. Posted 15 September at Well, it seems that they've done something, because I'm feeling really dizzy from these new "20" labeled ones, as opposed to the old "seroxat 20", which worked just fine. Or, you have to wait and see whether your body can adjust to the new Seroxat. Sometimes when I feel different I do notice it a few days after changing brand but the good news is that I haven't noticed any lasting difference. We want the forums to be a useful resource for our users but it is important to remember that the forums are not moderated or reviewed by doctors and so you should not rely on opinions or advice given by other users in respect of any healthcare matters. Ahhh please help someone They really should tell people that there is a difference. I've googled it and the only non technical stuff I can find is that sandoz is paroxetine anhydrous and Seroxat is paroxetine hemihydrate. Plus the stuff they use to make the tablet is a bit different. So they aren't identical, but will they work the same. I'm all of a panic because a doc once ignored my request for. Over the past three years, three major selective serotonin reuptake inhibitor (SSRI) antidepressants Paxil, Celexa, and Zoloft have all lost exclusivity, opening the door to widespread generic competition. Following introduction of generic sertraline this summer, Lexapro remains the only branded SSRI on the market.
