The dose range for amitriptyline in migraine prevention is 10 to mg per day 1. All information is for educational purposes only. The antidepressant should be taken every day with the aim of preventing headaches. Clinical trial found amitriptyline to be more effective than propranolol in mixed migraine and tension-type headache. Amitriptyline does not relieve an acute attack of migraine. Amitriptyline may be particularly useful in the patients with mixed migraine and tension-type headaches, and those with comorbid insomnia or depression. The acute attack can be aborted with painkillers or triptans. Its antimigraine effect is relatively independent of its antidepressant activity 2. When taken daily, amitriptyline can reduce headache duration and partly alleviate chronic headaches but cannot entirely eliminate them 7. Generally nortriptyline is better tolerated and possibly effective. The children are able to tolerate this dosing scheme and demonstrate good adherence to a dosing schedule of once a day 4. Starting dosage is 10 mg or 25 mg at night. This site complies with the HONcode standard for trustworthy health information: You can gradually titrate up the dose to achieve the optimal effect 10 mg every week or every two weeks. Amitriptyline can significantly reduce the severity, frequency, and duration of migraine attacks 3. Home Contact Us Cookies Policy. Amitriptyline Alphapharm is used to treat depression. Find patient medical information for Endep Oral on WebMD including its uses, side effects and safety, interactions, pictures, warnings and user ratings. My doctor recently prescribed me 10mg Amitriptyline nightly to help with sleeping. My nights were disturbed by hot sweats, associated with the menopause and this low dose (20mg is also a low dose -I believe up to mg is prescribed as an anti-depressant) has helped. I still get the night sweats, but find I Amitriptyline 10mg for headaches and anxiety please. Learn about the potential side effects of Endep (amitriptyline). Includes common and rare side effects information for consumers and healthcare professionals. "I took Amitriptyline 10mg for the pain and after 3 days I was completely on edge but also I was in a dark hole that I felt I could never climb out of. I realised that all the anxiety and emotional pain I had those 3 days it was just the amitriptyline, it was not me. I stopped immediately and I was myself again in a couple of days.
