Many people with borderline personality disorder BPD receive medical treatment. Thu Mar 8 Citations American Psychiatric Association American Journal of Psychiatry, Available studies tested the effects of antipsychotic, antidepressant and mood stabiliser treatment in BPD. Cutting became a ritual; my arm displayed the scars and I wore long sleeves everywhere. A year later, on a humid summer morning before the sun rose, I padded to my kitchen (where I kept my meds) and swallowed sixty capsules of Prozac. I went to bed and waited to die. Nothing happened, so I went for my morning roller. In a study published in the journal Psychiatry Research in January, a team of Italian researchers analyzed the use of interpersonal therapy and fluoxetine in 27 patients with relatively severe BPD symptoms. The 27 patients allocated to combined therapy were treated for 32 weeks with 20 to 40 mg/day of fluoxetine and. I was prescribed Prozac by my general doctor almost two weeks ago now. I've been taking it for about that long, missed two days this week because Prozac is making me more impulsive/ballsier. Apr 30, - fluoxetine: Everyone's on prozac these days, but its proliferation is not necessarily good. Prozac can ease depression & anxiety in BPD, but improvements are modest to say the least. Fluvoxamine: Used primarily in the treatment of MDD, OCD PTSD & anxiety, Fluvoxamine is a very potent SSRI. It has some. Nov 20, - While Paxil is prescribed when certain specific symptoms of Borderline Personality Disorder (BPD) are observed, other medications are administered instead of Prozac only if any additional illnesses or side effects are observed.
