My generics-happy insurer wouldn't cover Zoloft, so I contemplated paying the additional cost myself. This time, after a month, Sertraline hadn't made a dent in my symptoms. Copyright Los Angeles Times. The FDA, in October, confirmed that it was investigating but has yet to issue a comment or findings. Although both pills started out with equal amounts of active ingredient bupropion , according to the ConsumerLab report, the large upfront dose from the generic could account for the anxiety, irritability and nausea -- all known side effects of too high a dose of bupropion. Those who then went back on the brand-name medication reported that their symptoms disappeared. It turns out that hundreds of former Wellbutrin XL users were facing a similar dilemma -- although under far graver conditions. Yet the true insanity lies in the way many medical professionals, convinced by the FDA, keep pushing the myth that "generic drugs are identical to their brand-name counterparts.
