The more treatment options there are for people with arthritis, the better. The first is that, as with other NSAIDs, there may be an increased risk of serious or possibly fatal cardiovascular events, heart attack , or stroke with the use of Voltaren Gel. It also should not be used by people who developed asthma, urticaria, or allergic reactions after taking aspirin or NSAIDs. The elderly, people with impaired renal function, heart failure, liver dysfunction, and those taking diuretics and ACE inhibitors should be cautious when using Voltaren Gel. Talk to your doctor about using low-dose aspirin. If you are using cosmetics or sunscreen, do not use Voltaren Gel at the same time. Consequently, the risk of serious gastrointestinal and cardiovascular side effects associated with oral NSAIDs is considerably less with the topical formulation. In , the FDA updated the label for Voltaren Gel to include information about possible hepatic effects. For lower extremities, apply the gel 4 grams to the affected area four times daily. It now reads, "In postmarketing reports, cases of drug-induced hepatotoxicity have been reported in the first month, and in some cases, the first two months of therapy, but can occur at any time during treatment with diclofenac. Our Approach Performance Consulting Before starting any customized training development, we use on-site visits, focus groups, research and observation to clarify the content, audience, use, structure and evaluation of the intended training. These can happen without warning.
