Baltimore Gas and Electric Co. Shares of Pepco Holdings Inc. Bloom Boxes are essentially natural gas power plants, but instead of converting fuel to electricity through combustion, they convert fuel to electricity through an electrochemical reaction. Exelon's investment indicates a larger trend by businesses that are increasingly interested in producing their own power on-site with fewer emissions. Retrieved June 29, Retrieved September 3. The groups say the merger would complete Exelon's acquisition of regional utilities, giving it control of electricity delivery to nearly 2 million residents in Maryland. When completed, the fuel cell plants will produce enough electricity to power the equivalent of about 11, homes each year. Exelon's long history of hostility to renewable energy and competition from small clean energy businesses is a threat to the future of homegrown clean energy projects in Maryland," Miller said.
