Now that you know that in almost all cases, generics are exactly equivalent to the fancy brands, those misperceptions should not hold you back. All of these perceptions are wrong. But for everyone else, generic pills might look different or taste funny, but those properties aren't medically relevant. About half of generic drugs are actually made by the same companies making the brand-name versions. Perception versus reality Generics have a perception problem. And just last year, a paper in Psychosomatic Medicine found that when participants in what purported to be an anxiety study were switched from a brand-name drug to a generic, they reported more side effects with the generic even though they were actually taking the same placebo pill the whole time. Researchers analyzed shopping data from households and found that physicians, nurses, and pharmacists were far likelier than the average consumer to choose generic drugs. But it's true for real drugs, too. Generic drugs, both over-the-counter and prescription medications, are very strictly regulated by the Food and Drug Administration's FDA rules for generics. When asked why, participants said they thought generics would "require higher doses" and "result in more side effects. Healthcare workers people like your pharmacist and doctor, who should know a thing or two about the matter buy generics. Generic and store-brand drugs are just as rigorously tested, well-formulated, and effective as brand names. Generic drugs are not inferior to brand-name drugs. The cheaper price of store-brands is tempting, but we've all wondered: And it's only hurting the customers. The flavor, color, and other inactive ingredients of generics don't need to be the same as in the brand-name version, but in terms of the way the drugs act in your body, they are identical. As it turns out, we can't disregard the power the placebo effect has to influence how well a drug seems to work. How does it work (mechanism of action)?; What are the uses for ibuprofen? What are the side effects of ibuprofen? What is the dosage for ibuprofen? Which drugs or supplements interact with ibuprofen? Is ibuprofen safe to take if I'm pregnant or breastfeeding?
