

prescription strength adipex

For some patients, half tablet Dispense in a tight container as defined in the USP, with a child-resistant closure as required. Safety and effectiveness in pediatric patients have not been established. See Drug Abuse and Dependence 9 and Overdosage In a single-dose study comparing the exposures after oral administration of a combination capsule of 15 mg phentermine and 92 mg topiramate to the exposures after oral administration of a 15 mg phentermine capsule or a 92 mg topiramate capsule, there is no significant topiramate exposure change in the presence of phentermine. Phentermine hydrochloride USP is a sympathomimetic amine anorectic. There are reports of patients who have increased the dosage of these drugs to many times that recommended. Because pediatric obesity is a chronic condition requiring long-term treatment, the use of this product, approved for short-term therapy, is not recommended. Overdosage of pharmacologically similar compounds has resulted in fatal poisoning usually terminates in convulsions and coma. Phentermine is related chemically and pharmacologically to the amphetamines. The most severe manifestation of chronic intoxications is psychosis, often clinically indistinguishable from schizophrenia. Manifestations of acute overdosage include restlessness, tremor, hyperreflexia, rapid respiration, confusion, assaultiveness, hallucinations, and panic states. The least amount feasible should be prescribed or dispensed at one time in order to minimize the possibility of overdosage. Acidification of the urine increases phentermine excretion.
