Adapting shelters and homes to the social and environmental needs of cats and using stress reducers, such as the synthetic feline pheromone Feliway, can help reduce the number and severity of feline viral upper respiratory outbreaks. Administering the medication with food can help offset stomach upset. Famciclovir Famciclovir is an antiviral drug used in veterinary medicine to predominantly treat cats suffering from feline herpes virus and FHV feline viral rhinotracheitis. Have a look at the Manor Farm complex with all the facilities necessary to look after your pet. Primary causes of bacterial infection include Bordetella bronchiseptica , Chlamydia felis , Mycoplasma spp , Streptococcus spp , and P. Possible Side Effects of Famciclovir While Famciclovir is safe and effective for use in cats, it is a potent drug and some patients may experience particular side effects, the most common of which include nausea, vomiting, diarrhea and low-grade fever. Culture and sensitivity testing is also not encouraged in acute cases because common bacterial pathogens are difficult to grow in standard cultures and a positive culture may be the result of commensal bacterial growth. Secondary bacterial infections like sinusitis and empyema can also develop after some time. This indicates the role stress plays in recrudescence of viral illness and suggests that modulating stress may be a key treatment component with FHV-1 or FCV-infected cats. The main signs are recurrent conjunctivitis, corneal inflammation, ulceration and discharge from the eyes. If a cat becomes infected at an early age, the risk of FHV causing permanent damage to the nasal and sinus tissue is substantially higher. She has held many positions with oversight responsibilities for editorial and business direction, including for Veterinary Learning Systems publisher of Veterinary Technician and Compendium , Vetstreet. Lappin encouraged all attendees to become familiar with them. Lappin reminded attendees that secondary bacterial infections associated with feline herpesvirus FHV-1 or feline calicivirus FCV are more common than primary bacterial infection.
