The insatiable demand has led to shortages at pharmacies across the country. They view Adderall more like a study aid, DeSantis says, and talk about it openly. Read more from this series: To some, those numbers are cause for alarm. What if Adderall turns out to be the new coffee ubiquitous, mostly harmless little helper that enables us to spend more time poring over spreadsheets and less time daydreaming or lolling about in bed? Others, wary of being played for fools, refuse prescriptions to patients who could really use them. As useful as they may be during the occasional deadline crunch, no study has linked Ritalin or Adderall use in people without ADHD to sustained increases in things like grades or performance reviews. Human enhancement is giving us superpowers once reserved for comic-book heroes ; technology is expanding our minds ; brain-computer interfaces let you move things with a thought ; choose your own sixth sense ; steel yourself with a robotic exoskeleton ; and is China engineering genius babies? Other studies have shown modest performance gains. If it gives them an unfair advantage in the workplace, that could put pressure on others to take drugs themselves just to keep up. But in the past decade or so, psychostimulants like Adderall have exploded in popularity among people without a diagnosis or prescription. Concerta is a popular stimulant medication primarily used to treat ADHD in adults and children ages 6 and up. A single dose lasts up to 12 hours, and is designed to improve focus, and decrease impulsivity and hyperactive behavior while active.
