Tier 3 labeling means that the product is expected to result in a meaningful reduction in abuse. Hysingla ER does not contain acetaminophen, the overuse of which has been reported to be a leading cause of acute liver failure in the United States. As extended-release products such as Hysingla ER deliver the opioid over an extended period of time, there is a greater risk for overdose and death due to the larger amount of hydrocodone present. According to the FDA statement, cases of severe liver injury have been reported in patients who took more than the prescribed dose of an acetaminophen-containing product in a hour period, took two or more acetaminophen-containing products simultaneously, or combined alcohol with acetaminophen. Hydrocodone may cause spasm of the sphincter of Oddi. About Purdue Pharma L. Accidental ingestion of even one dose of Hysingla ER, especially by children, can result in respiratory depression and death due to an overdose of hydrocodone. To learn more about Hysingla ER, visit: Hysingla ER is the first and only hydrocodone product to be recognized by the U. Avoid use in patients with congenital QTc syndrome. Hysingla ER is indicated for the management of pain severe enough to require daily, around-the-clock, long-term opioid treatment in patients for whom alternative treatment options are inadequate. Abuse or misuse of Hysingla ER by crushing, chewing, snorting, or injecting the dissolved product will result in the uncontrolled delivery of the hydrocodone and can result in overdose and death. Monitor patients during dose initiation or titration. About Acetaminophen Toxicity The use of products containing acetaminophen in high doses over a long period of time can cause severe liver injury, with reports of up to 63 percent of unintentional acetaminophen overdoses associated with the use of opioid-acetaminophen combination products. To gain Tier 1 labeling, data from laboratory manipulation and extraction studies that assess how the abuse-deterrent properties of a formulation can be defeated or compromised are provided to the FDA. This observation should be considered in making clinical decisions regarding patient monitoring when prescribing Hysingla ER in patients with congestive heart failure, bradyarrhythmias, electrolyte abnormalities, or who are taking medications that are known to prolong QTc interval. Abuse-Deterrent Opioids- Evaluation and Labeling: Monitor patients with biliary tract disease, including acute pancreatitis. Tier 1 labeling means that a product is formulated with physico-chemical barriers to abuse. To date, 80 percent of commercially insured lives have access to Hysingla ER through their health plans. Jun 15, - Hydrocodone Acetaminophen Manufacturers. Dozens of companies make Lisinopril. There's a partial list below.
