

generic topamax and weight loss

Newsletter Sign Up Continue reading the main story Please verify you're not a robot by clicking the box. I'm just not hungry. Topamax can have significant side effects, most notably difficulties with memory, attention and concentration. Advertising revenue supports our not-for-profit mission. She weights now, and hopes to reach You must select a newsletter to subscribe to. Information is for End User's use only and may not be sold, redistributed or otherwise used for commercial purposes. An error has occurred. Drug companies fear that they will run afoul of the Food and Drug Administration, and doctors fear that they will become the agents of medical disaster by prescribing weight-loss drugs that turn out to cause unforeseen harm. Recently, in what might seem an odd twist, researchers have been studying weight loss in people taking two drugs already on the market, but approved for a completely different use, to treat epilepsy. You agree to receive occasional updates and special offers for The New York Times's products and services. The human body seems to guard its fat stores jealously, and attempts to outsmart the system often fail outright or backfire, causing dangerous side effects. Ivan Lieberburg, chief scientific and medical officer at Elan, said, "We were extremely excited about these results. Events Guide Television Theater Video: But in the meantime, obesity experts say some doctors are already prescribing the original version for weight loss, though it is not clear how common the practice is. The drugs are not powerful; obesity experts describe them as moderately useful. The amount of medicine that you take depends on the strength of the medicine. Feb 8, - Hi everyone, I've been put on topamax to hopefully assist with weight loss as am obese and am really struggling with food. I've just titrated up to 75mg (25 in morning and 50 at night) and have so far found no changes in appetite and no weight loss. I realise weight loss is only a possible side effect, but I was When is it better to take Topamax in AM or PM for. Topamax (topiramate): "My original intent with Topamax was never weight loss, (mood) nor would have I ever believed the results I've obtained 19 months later. Quick negatives-my mental agility decreased significantly, I misspell my own name; most food & beverages taste like rubbish; and, the generic version is subpar. Aug 29, - But with some researches and studies, it is proved that this Topiramate helps to lose your weight and make you stay fit and slim. However, we are unknown of the mechanism of action which produces therapeutic effects like some says it alters voltage gated sodium channels and various calcium channels. I took Keppra for awhile, but had breakthrough seizures and when my dosage was increased, my hair started falling out. So my neurologist switched me to Trileptal. I had terrible headaches on this med, so started the Topamax this past January. It seems to be working, though I'm a little concerned about the weight loss. Feb 5, - Topamax (Topiramate) is an anticonvulsant medication that is primarily used for the treatment of epilepsy, but has also been approved for migraine prevention and as an adjunct to phentermine for weight loss. It is also commonly used as an off-label medication to treat bipolar disorder as well as borderline. Aug 2, - When I started writing out to write this article, I wasn't sure I'd name the drug that had caused my weight loss, but the FDA's recent decision to allow Topamax to be used as an ingredient in a new weight loss drug changed my mind. In case you're wondering, my opinion on this decision isn't positive. Includes: what is topamax?, how does topamax contribute to weight loss?, side effects of topamax, what is the right topamax dosage for weight loss, and other factors to consider. My feet and legs swell up, loss of hair, can't make a complete sentence, etc. Does any of this leave if I stay on it over a month? Please help, I can't take my Fioricete w/Codiene because as a former addict, don't need the extra Narcotic, but Topamax(of course have to take the generic) seems so far out there. I'm getting Topamax (non-generic) tomorrow and while I hope it makes these annoying dull headaches go away, I really hope i lose these extra pounds. But it sounds like people don't have much success with weight loss their second go-around? Yes? I'm also dreading the hair loss. What have people found to be effective. For oral dosage form (extended-release capsules). For weight loss: Adults At first, one tablet of milligrams (mg) of phentermine and 23 mg of topiramate once a day for 14 days. After 14 days, your doctor may increase your dose to mg of phentermine and 46 mg of topiramate once a day. Then, your doctor may.
